

Product Description

The Flow Data Table is a Lightning component that can be placed onto a Screen with the Salesforce Flow Builder to present a list of records in table format. This product is available on the Salesforce AppExchange in both free and paid versions which offer different capabilities.

Product Features

The Flow Data Table is a highly configurable Lightning component. The component can be configured in Read Only, Sort and Select, In-Memory Editing, and Database Editing modes. The Read Only mode will be available for free. The other modes will be available via a per-user-per-month fee with no upfront cost.

Product Benefits

The Flow Data Table will allow users to view records in a visually appealing data table. With simple point and click drag and drop configuration, a data table can be added to a flow quickly and easily by a Salesforce administrator. The data table will display fields according to their field definitions defined within Setup. All Lightning Platform security features are automatically supported by the data table. The use of this component allows Salesforce users to view table formatted data without the need for costly, time-consuming custom development.
